Name of current attending veterinarian: _____

In the past 5 years, have you been convicted of any animal abuse or cruelty? Yes ____ No ____

If YES, explain where/date/convicted of.: _____

NYE COUNTY CODE

6.30.030: OWNERSHIP AND POSSESSION OF SPECIAL CONDITIONS ANIMALS:

- A. It is unlawful for any person, corporation, partnership, or other legal entity to import, transfer, sell, purchase, or possess an animal classified as special conditions within Nye County unless that person, corporation, partnership, or other legal entity holds a permit or is exempt from holding a permit under this chapter and under the provisions of Nevada Revised Statutes 571 and 503 and Nevada administrative code 441A, 503, and 504.

- B. It is unlawful for any person, corporation, partnership, or other legal entity who holds a special conditions animal permit to sell, transfer, deliver or give an animal classified as special conditions to any other person, corporation, partnership, or other legal entity within Nye County unless the other person, corporation, partnership, or other legal entity also holds a permit or is exempt from holding a permit under this chapter and under the provisions of Nevada Revised Statutes 571 and 503 and Nevada administrative code 441A, 503, and 504. (Ord. 430, 2012)

Special Condition Animal Inspection Guidelines

Facilities— All facilities must be surrounded by a perimeter fence (secondary) barrier of at least (8) feet in height and a minimum of (4) feet from the cage holding the animal(s), or such other fencing, building, or other protection of the enclosure where the animal(s) is kept sufficient to prevent unauthorized public entry or direct physical contact between the animal(s) and the public.

Ventilation— All indoor enclosures and caging provided for animals must provide adequate ventilation at all times to maintain the health and comfort of the animal(s). A system of ventilation must provide fresh air by means of windows, doors, vents or air conditioning, and be designed to minimize drafts. If ambient temperature reaches 85 degrees Fahrenheit or greater, air conditioning, evaporative cooling, exhaust fans and vents must be provided.

Lighting— Facilities must be lit well enough to allow safe and easy access for feeding, cleaning, and complete inspection.

Interior Surfaces— The interior of a facility must be substantially impervious to moisture, i.e. cement or other sealable surface, and be able to be easily cleaned and sanitized.

Primary Enclosures— Animals must be housed in structurally sound enclosures that are in good repair and meet APHIS' minimum space requirements. The floors must protect the animals from injury. The cages must be dry and clean and allow animals easy access to food and water.

Sanitation— Animal waste must be removed and disposed of regularly and as necessary. Primary cages or enclosures should be sanitized at least once every 2 weeks. Facilities must not allow trash to accumulate.

Pest Control— Facility managers must have an effective program to control insects, ectoparasites, and avian and mammalian pests.

Feeding and Watering— Animals must be provided with nutritious, palatable food that is free from contamination, properly stored, and served in a clean receptacle. Potable water must be made available twice daily for 1 hour if it is not available all the time.

Outdoor Shelter— All outdoor cages shall provide adequate shelter from inclement weather conditions, shade from the sun and provide for the protection and health of the animals held within.

Compatibility— Female animals in heat must be separated from male animals except for breeding purposes. Animals with vicious dispositions should be housed apart from other animals. All nursing young should be separated from adult animals other than their mothers. Different species of animals should not be housed together unless compatible.

Recordkeeping— Facility managers must maintain accurate and complete records of the sources of all animals that come into their possession. Managers also are required to keep records of the dates of acquisition and disposition and to properly identify the animals on the premises. These records must be made available for inspection whenever necessary.

Adequate Veterinary Care— Programs of disease control and prevention, euthanasia, and veterinary care must be established and maintained under the supervision and assistance of a veterinarian. A caretaker also must observe the animals daily.

Handling— Every Special Condition animal owner/facility manager must: (a) be at least 18 years of age, (b) have at least two (2) years experience in the care and handling of the animal family for which he possess, (c) a plan for the quick and safe recapture of the animal(s), or if recapture is not possible, for the destruction of any animal that should escape, (d) a plan for the emergency evacuation of the facility holding the exotic animal(s) if the need arises.

Escape and Liability for Escape— Owner/facility manager (a) shall immediately notify Animal Control of any escape of an exotic animal, (b) shall be liable for any costs incurred resulting from the escape of an exotic animal, (c) Neither the County, Animal Control, nor any agency, officer, official employee or agent thereof shall be liable for any exotic animal that expires, or is injured or destroyed during recapture: nor is liable for any damage or injury caused by said animal.

Signage— All locations housing animals falling under these conditions must have readily readable signage posted, containing Emergency Contact numbers for persons who can be immediately contacted to respond to the location in the event of an emergency situation.

Transportation— Exotic animal owners/facility managers are required to provide animals with adequate space, ventilation, and shipping containers during transportation. Most animals transported must be weaned and at least 8 weeks old and cannot be housed in transport enclosures for a period of time not to exceed 48 hours.

Inspection Procedures

Upon arrival at a facility, the owner / manager must give the Animal Control officer full access to all areas where regulated animals are kept. The owner / manager must supply the Animal Control officer with an inventory pertaining to all of the animals that are housed at the facility. This list of animals needs to be updated with Animal Control if changes occur immediately via phone / fax / e-mail. This list needs to include type of animal, age, any special circumstances, attending veterinary, name, identification markings and any necessary comments. All animals regulated under all Federal, State and Local regulations / laws / codes must be shown to the inspector, who may examine any animals that appear to be in poor health. The Animal Control officer also observes how their caretakers handle the animals. Dealers, exhibitors, breeders, caretakers, or researchers who interfere with the Animal Control officers duties are in violation of the Nye County Code.

Generally the owner or manager of a facility accompanies the Animal Control officer during inspection. If the officer observes that the facility is not in full compliance with the Federal / State / Local requirements, he or she will explain to the owner or manager all deficiencies noted during the inspection. The officer will then give the owner a deadline for correcting these deficiencies. The owner or manager and the officer both sign the completed compliance inspection form.

If deficiencies are noted, the officer will return to re-inspect the facility. If a facility has not corrected the deficiencies during the given timeframe, all uncorrected problems are carefully documented for possible legal action. The officer will return to facilities that have problems as needed to encourage compliance with the Federal / State / Local regulations. When a facility fails to correct deficiencies or if the health of the animals at the facility are in jeopardy, Animal Control may issue a citation and forward the case for prosecution..
